Philosophy

The right information
at the right time and
at the right place.

THE CONCEPT

LCC-3000 series devices can be used as electronic information panels, public television sets, DVD/video display systems, advertising systems and for a number of other diverse applications. Their two outstanding characteristics are their individual design and modular set-up. The devices can be optimally integrated into their surroundings and seemingly blend in as if they were part of the architectural design of the room. The various sizes and modular set-up allow almost all integration and positioning requests to be realized.

A wide range of materials can be used, and the special design of the electronics means that all electronics-related requirements can also be easily met.

Digital Signage Player

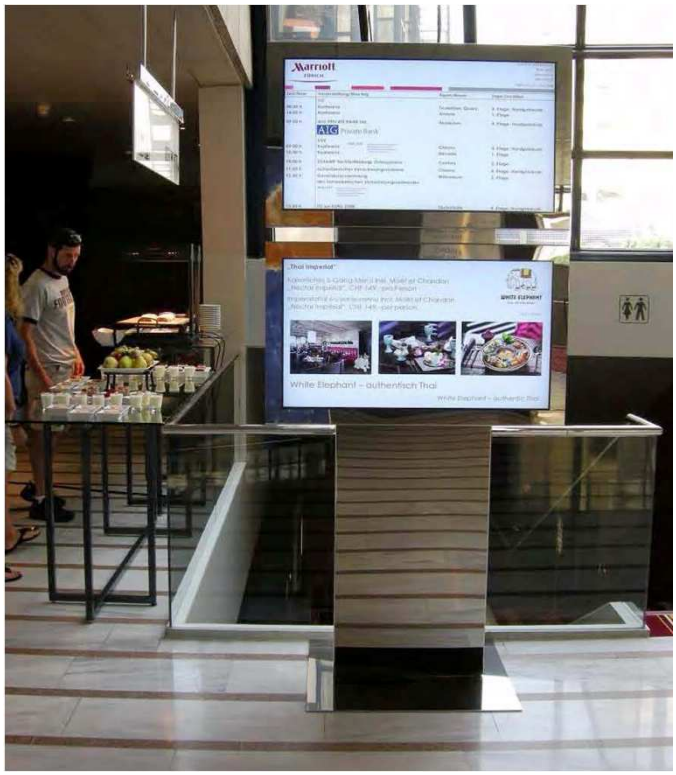

Floor-standing system (LCD integrated) with glass panel
screen sizes between 15“ & 70“
in portrait or landscape format

wall-mounted (fitted to the wall) information boards
