

Interactive, high-definition TV (HD)

The future is HD
The new digital TV platform developed by Interactive Multimedia VDA is able to offer an unparalleled level never before experienced: more sharpness, more resolution, more space to accommodate services and multimedia content. Quality guaranteed through the use of High Definition LCD televisions and exalted through radical change in content design.

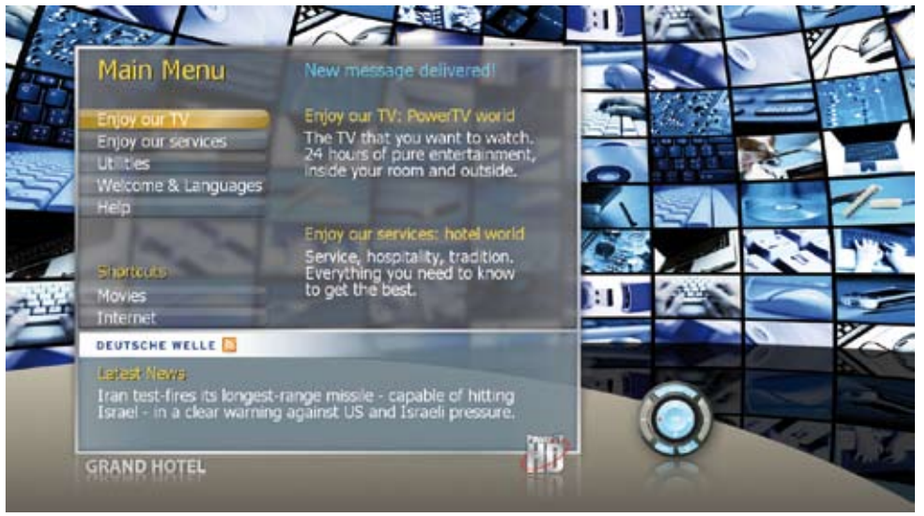

Infinite wealth
Unlike traditional interactive TV systems, HD PowerTV makes it possible to develop interfaces that are richer and better structured. This means not only more information, but also news in real time updated automatically (RSS), a video channel with the formula Picture-In-Picture (PIP), weather forecasts and more. Everything on the same screen. In addition, with HD resolution the legibility of text is greatly improved even from a distance. The overall effect is much richer content along with quality, modernity and elegance and perceptible value in the services offered by the hotel.

WHY HD TV BY VDA
- Because it is a TV system specifically designed to enhance the performance of most modern HD televisions and Full HD.
- For the exceptional picture quality.
- For the wealth of content, its modernity and elegance.
